

Project Report

Student Performance Analytics Dashboard

Executive Summary

This project manages student records, calculates averages, generates charts and exports CSV reports.

Problem Statement

Educational institutions need simple analytics tools.

Objectives

- Manage student records
- Analyze performance
- Visualize results
- Export reports

Technologies

Python, Tkinter, Pandas, NumPy, Matplotlib, CSV.

Features

CRUD operations, charts, reports, search, analytics.

Future Improvements

Dark mode, database, PDF export, authentication, ML prediction.

Conclusion

The project demonstrates Python, data analysis and software engineering skills.
